Subject: RE: Response to AVERT Query

Hello,

I had another question about AVERT – is there a spreadsheet or dataset, either in the FYS or in the module itself, from which we can extract the average (pre-EERE) annual generation and emissions for each power plant? I have been looking at the FYS template for 2013 but when I compare the values (summed by AVERT region) to the pre-EERE values shown in the AVERT module (annual output tab), I am not able to match them.

Many thanks,

May

Subject: Response to AVERT Query

Hi May,

Thank you for contacting the AVERT help desk. To see the fuel types included under the “other” category, please download the AVERT Future Year Scenario template and click on the “EPA Facilities” tab. Columns O through U are hidden. If you unhide those columns and filter column V for “other,” then you will see the primary fuel type for each facility. AVERT relies on data reported to EPA’s Clean Air Markets Division (CAMD). If facilities did not report primary fuel type to CAMD, then column Q may be blank.

Please let me know if you have any additional questions.

Rebecca Bayham
